

HT-M-IMU

High precision MEMS IMU, gyro bias stability $0.02^\circ / \sqrt{\text{h}}$ – $0.5^\circ / \sqrt{\text{h}}$ (Allan variance).

Product characteristics

1. High precision, small volume, long-term stability.
2. Full temperature compensation.
3. Users can re-set gyro zeros that exclude earth rotation by serial instructions.
4. Has strong ability to withstand shock vibration.

Product description

HT-M-IMU is a small, high-precision MEMS inertial measurement unit, which integrates three-axis high-precision MEMS gyroscopes, three-axis high-precision MEMS accelerometers, and the full temperature compensation of the product before leaving the factory to ensure its stable performance in complex temperature environments.

The product is widely used in intelligent handling robots (AGV), autonomous underwater vehicles (AUV), industrial equipment, measurement / map, stable platform, traffic, unmanned aerial vehicles (UAV), unmanned ground vehicles (UGV), etc.
